

DEOXYCHOLIC ACID

BELKYRA®

RECOMMENDATIONS AFTER YOUR TREATMENT

Congratulations, you have finished your double chin treatment session with deoxycholic acid (Belkyra®)! Here are our recommendations to follow for the next week. If you have any questions or concerns, do not hesitate to contact us immediately. We are here to help you.

- Don't worry if the treated areas are slightly sensitive or swollen. These symptoms will go away in the next few days.
- **Avoid massaging or handling** the treated area for the first 24 hours.
- You can apply **cold compresses** as needed for a period of 10 to 15 minutes, every 30 to 60 minutes. Avoid applying ice directly to the skin.
- The application of an **Arnica cream** (Traumacare® / Arnicare®) applied 3 times per day can accelerate healing, and reduce the bruising and swelling that can sometimes occur after treatment.
- The appearance of an asymmetrical smile or muscle weakness, skin ulcers in the injected region or difficulty swallowing must be **reported immediately** by calling the number below.
