

DEOXYCHOLIC ACID

BELKYRA®

RECOMMENDATIONS BEFORE YOUR TREATMENT

We look forward to seeing you for your treatment! Until then, follow these recommendations to optimize your results.

- Avoid, if possible, alcohol, anti-inflammatory drugs (Advil®, Motrin®, Celebrex®, Naproxen®, etc.), Omega-3 as well as multi-vitamins in the 7 days preceding your treatments, because these increase the risk of bruising.
- If you have an infection or are taking antibiotics, please postpone your appointment.
- For more comfort during treatments, you could take 2 tablets of acetaminophen (Tylenol®) 500 mg one hour before your appointment.
- We recommend that you suspend the application of Retin-A creams three days before your treatment, as these may increase the appearance of redness and irritation after treatment with Belkyra®.
- Plan the right time to do your treatments, as there may be redness, slight swelling and, more rarely, bruising following your injectable treatment.
